competencies: Server Applications

Yearbook API

Introduction

Note: This can be a pair programming activity or done independently.

Your task is to create an API for a WDI yearbook. This API will have no front-end but will render JSON so that we might consume it later.

Exercise

Requirements

- Create an express API that has two models, `User` and `Projects`

The User model should have these fields:

- name
- twitter (String link to twitter profile)
- github (String link to Github)
- image (String)
- bio (String)
- portfolio (String for website)
- projects (referenced array of Projects)

The Project model should have these fields:

- title (String, required)
- description (String)
- github (String)
- website (String)

The API should have RESTful routes for both objects.

Note: You must use `populate` to output the correct JSON.

Starter code

There is no starter-code.
